

StaticSmart Flooring Options for Access Floor Systems

Raised access floors are increasingly becoming an integral part of today's modern facilities. By incorporating access flooring in a buildings design, power can be placed under the floors, rather than in walls and furniture. This speeds up installation times, makes for quick power moves, and lowers moving costs. Access floors also improve airflow with underfloor air, and making temperature control more manageable.

We have you covered

Although there are many choices for access floor finishes, no other brand of carpet tile flooring offers you more selection, static control performance, and benefits than StaticSmart carpet tile.

Because there is no carpet tile product currently on the market that is ideal for every application, it is important to be careful when specifying static control carpet tile. StaticSmart carpet tile is offered in three levels of protection, ensuring that you aren't paying more for static protection than is necessary for your project. Our static control specialists will work with you to select the appropriate level of static protection matched specifically to your application.

StaticSmart carpet tile can be applied to raised access flooring with the following methods:

- Release Adhesive
- Permanently Laminated Tile
- LokDots and Peel & Bond
- PosiTile

Flexible installation options

StaticSmart carpet tile is the ideal choice for new access floors, or for renewing the appearance of old or existing access floors, as it can be installed easily over most existing flooring systems. Our carpet tile offers superior static control to vinyl or laminates and works on ALL types of access floors: Stringer and stringerless, bolted and gravity held, with or without existing panel covering (high pressure laminate, VCT, carpet, paint, etc.) Installing carpet tile on access floors can be accomplished using several methods, all of which are available options with StaticSmart carpet tile.

Gaining access to the underfloor is easy with StaticSmart Carpet tile: whether it's Peel & Bond, PosiTile, LokDots, or using our patented CompuRelease conductive releasable clear adhesive, simply lift out the carpet tiles over the area and remove the access floor panel. The carpet tile re-installs over the panels without the need for additional adhesive. Panels with laminated StaticSmart Carpet tiles lift right out with a panel lifter tool!

- *Permanent Performance*
- *Level 2 and Level 3 Styles meet ANSI/ESD S20.20, Motorola R56, FAA-STD-019e Wide Selection of Pattern and Color Choices*
- *Choose Your Level of Protection*
- *Choice of Installation Methods*
- *Lifetime Warranty.*

StaticSmart carpet tile is the ideal access floorcovering choice for E911 and public safety facilities.

STATICSMART

Release Adhesive System:

StaticSmart Conductive Release Adhesive is an easy to use, economical, and effective system for installing StaticSmart modular carpet tile.

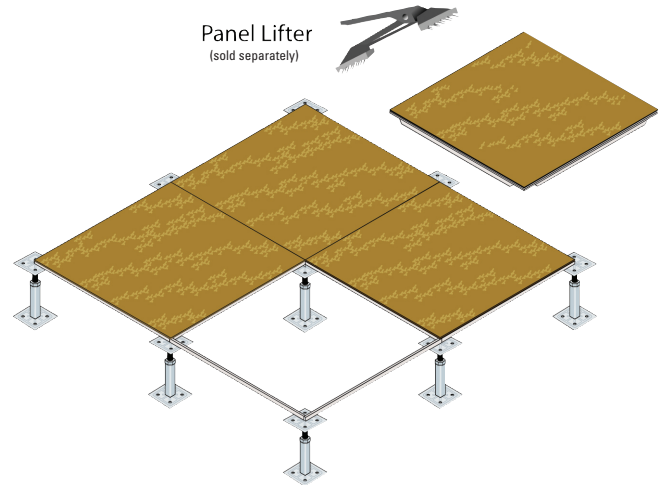

- Easy to install, reusable, durable
- Adhesive bond will not degrade
- No VOC's
- Quick drying time
- Patented conductive formula for permanent, maximum performance
- Removal is quick and easy
- Flexibility for workstations, and reconfiguration
- In-house repairs are a snap
- Minimal waste with installation

Permanently Laminated Tile System:

StaticSmart carpet tile products are available permanently laminated to access floor panels, making installation even easier.

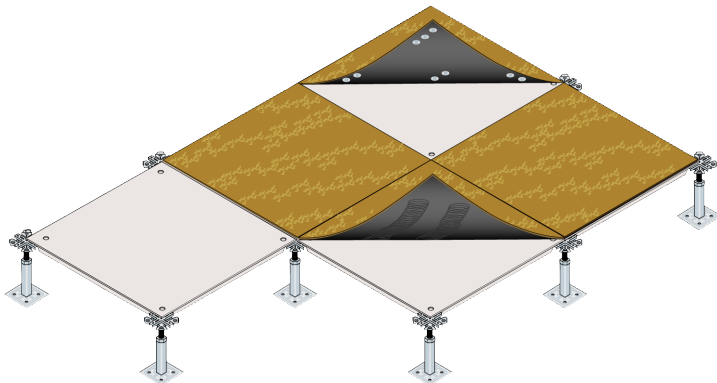

- Near seamless appearance
- Will not shift, dome, cup or dish - guaranteed
- No edge ravel
- Superior tuft bind
- Permanent static control under any conditions
- Removal is quick and easy with panel lifter tool

LokDots and Peel & Bond Systems:

StaticSmart carpet tile products are also available in two easy-to-install options that do not require messy adhesives. LokDots is a non-toxic and odorless system that provides an alternative to wet adhesive, providing the ease and versatility of a flexible installation. Our Peel & Bond product is manufactured with a pressure sensitive adhesive already applied to the back of the tiles, making installation easy and mess-free.

- Efficient installation, increasing productivity and reducing costs
- Durable applicator requires no maintenance and little training (LokDots)
- Can be installed over new and used access floor panels
- Ideal for use in occupied space, system eliminates the mess, curing time and odors of wet adhesives allowing immediate occupancy
- Economical - Easy to install, reusable, durable
- Out of the box ready: Install and go - immediately usable (Peel & Bond)
- Tiles can be stored, stacked and used again

PosiTile System:

Four ultrasonically welded buttons on the underside of a StaticSmart carpet tile provide precise indexed alignment with four matching holes in the ConCore® panel. This allows anyone to quickly and easily rearrange their work area. By using StaticSmart PosiTile you will reduce move times, eliminate waste due to churn, and not have to worry about additional attic stock.

- Permanent performance
- Level 2 LAN & Level 3 MC Meets ANSI/ESD S20.20, Motorola R56, FAA-STD-019e
- Wide selection of pattern and color choices
- Ultrasonically welded buttons provide precise alignment and stability without using adhesives
- One-to-One fit for panel by panel flexibility
- No Adhesive Necessary
- Lifetime warranty
- Easy to maintain, easy to repair
